

Quality Policy

Our mission in quality is not to be good, but to be excellent. Quality, technology, reliability, profitability, delivery reliability and our dedicated service convince our customers long-ranging.

Our company's success is built on this foundation. For this reason, we have decided to implement an integrated management system (IMS) based on the international standards UNE-EN-ISO 9001:2015 and UNE-EN-ISO 27001:2017.

Our benchmark is quality from a customer's perspective, the consideration of their expectations and needs. Every employee adjusts his or her thinking and actions accordingly, our cooperation is guided by this.

Our aim is constant improvement. Work results and/or information that are delivered to our customers must always be flawless and in all regards.

Évo's management and all employees commit themselves to this quality policy.

The organization of Évo has among its commitments the full satisfaction of our customers, to see their expectations fulfilled at any time and to try to ensure that these commitments endure over time, also by the management of information security.

The management of Évo, as well as our staff, is convinced that this can only be achieved by:

- ❖ An exhaustive control of the company's processes that allows us to identify our errors and identify opportunities for improvement, especially our purchase and management processes of our suppliers
- ❖ The commitment to continuous improvement
- ❖ A fluid communication with our environment, clients, authorities and other interested parties
- ❖ The proper maintenance of our infrastructure
- ❖ The continuous training and awareness of the staff and those who work on our behalf
- ❖ Compliance with the applicable legal requirements, other requirements that we acquire with our clients and requirements of information security
- ❖ Satisfaction of all the needs and expectations of our customers
- ❖ Use the methodology of risk evaluation to prevent possible deviations or non-conformities of our management system

This policy must be communicated, understood and applied by all, considering this direction as the first to assume the guidelines described. It will be available to relevant stakeholders.
